

# What is BeeBaby Finance?

Multi Chain-powered launchpad, to vanish the single-chain limits of a capital raise for ambitious Multi Chain projects.

## The eternal blockchain trilemma

The **blockchain trilemma** is a concept coined by Vitalik Buterin that proposes a set of three **main issues** that developers encounter when building blockchains. More often than not, creators are forced to sacrifice one 'aspect' for the sake of the other two.

**Decentralization:** Rather than being managed by a single entity, blockchains distribute control over the network equally to all participants.

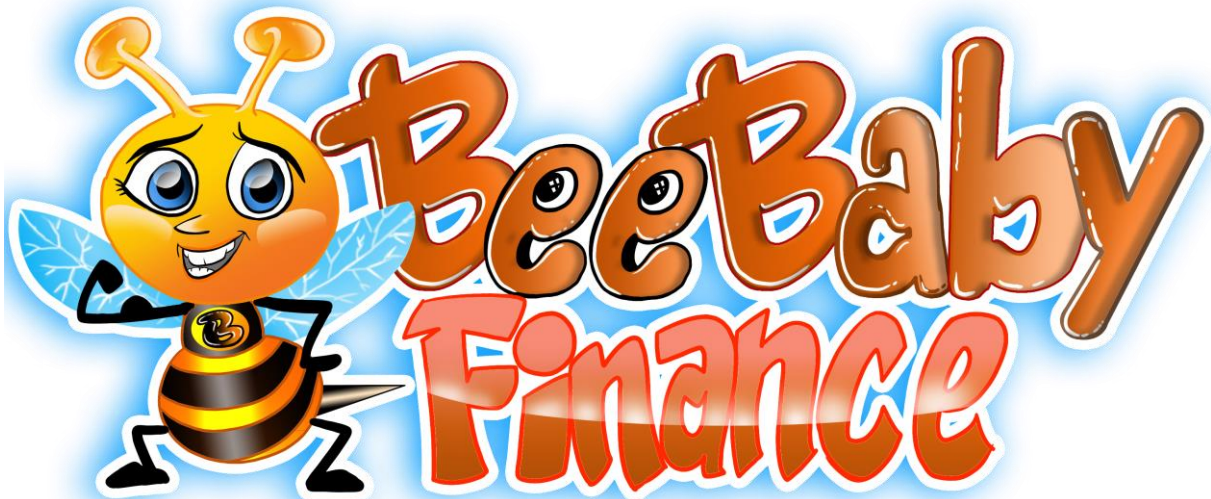

**Security:** Blockchain networks should have ironclad defenses that prevent malicious entities from taking over. **Scalability:** Blockchains should support an enormous number of transactions and users without faltering by increasing fees and transaction times. For some in the industry, achieving all three aspects is an impossible feat that will never be done, at

least in the near future. However, there are still ambitious developers who believe that blockchain networks can have all three and then some.

**Ethereum** is the most decentralized and secure blockchain ever, but it has become too expensive and slow. On the other hand with **Binance Smart Chain**, you can't avoid obvious 'corporate chain' trade-offs: centralization, the shady process of validation, suspiciously low fees. Other blockchains, such as **Avalanche Chain And Matic**, are born and constantly growing to bring solutions to the problems with the two largest smart-contract-based chains. There is not a winner, each of them is valid for some reason or other, and investors move their capital by choosing the one that fits better their ideologies and needs.

But when it comes to a new project and its sale phase, the similarity of the blockchains and the single-chain limit make it limited to having to choose which chain to base its work on, giving up the benefits of a Multi Chain based sale and also limiting investment opportunities for people on other blockchains.

BeeBaby Finance is here to change the game, definitively.

## A REVOLUTIONARY MULTI CHAIN PROTOCOL

BeeBaby Finance is the solution for Multi Chain oriented projects, being the bridge to a new organic way of fundraising across the EVM based blockchains. Launch your project through our platform and collect \$ETH, \$BNB,\$AVAX,\$MATIC.

**Multi Chain sales:** Expand your fundraising horizons with our platform. Defeat the classic single-chain limit, choose our multi-chain protocol (ETH, BNB, AVAX, MATIC) to attract investors from all over the crypto community.

**Multi Chain wallet connection:** Connect several wallets from different blockchains with a single click. Our platform will organically synchronize all your assets to have faster access to all the functions hosted by the BeeBaby team.

**Multi Chain instant swap and staking:** Swap and stake in a revolutionary way on our platform. Use our No-Fee blockchain bridge to manage your funds in the most decentralized way possible, stake your assets and claim the reward you prefer with our multichain pools.

## COMMUNITY ORIENTED TOKEN FEATURES

**Proportionate levels of DAO Governance:** Holding a specific amount of \$BeeBaby Finance will allow you to vote for different decisions: the more you hold, the higher your impact will be on our development; the community will decide for fees, projects hosted on the platform, updates, and many others.

**Dynamic Tier System:** Hold and Stake \$BeeBaby to join our Tier System: most of the actual launchers have static tiers which can become obsolete also in the middle of a sale, giving uncertainties that reflect on the token price; in order to prevent this annoying phenomenon, we are bringing a new dynamic system that adapts to every market situation and still guarantees a fair pool allocation for the \$BeeBaby holders.

**Automatic liquidity:** Our smart contract ensures that the pre-set initial DEX liquidity of a project pool will be viewable from the pool itself by everyone before it opens. The smart contract also guarantees that the liquidity will be automatically added and locked.

# IMPROVED SAFETY WITH ADVANCED SECURITY VERIFICATIONS

Users safety should always be the main goal for a project, and when it comes to the blockchain, and in IDOs in particular, the chances of having bad experiences, being robbed, and losing funds are particularly high for the newcomers, but sometimes also for expert users. Our **Advanced Security Check** will prevent every investor to experience something like that.

Our **Advanced Security Check** will prevent every investor to experience something like that.

Then in the post-sale phase, we will also **cover the Liquidity Lock process**, securing a safe environment for our users but also for traders on decentralized exchanges.

# Tokenomics

## DAO GOVERNANCE

Starting from the **DAO Features**, \$BeeBaby community will be the real **head of the project**, deciding for future projects hosted on our platform, fees, marketing proposal, platform updates and more.

## TIER-FREE SYSTEM

However, the **revolutionary** role that \$BeeBaby will bring to the cryptoworld is the **Tier-Free System**, giving value to **every single token** held by our investors, **defying the obsolete concept of static tiers**.

ROAD MAP

# Our Strategy & Project Plan

DEC 2021

### Phase 1

BeeBaby Launchpad concept ✓  
Tier Free Allocation system concept ✓  
Whitepaper release ✓  
First Testnet releases ✓

JAN 2022

### Phase 2

Website And Bsc Integration ✓  
Audit and Kyc ✓  
Influencer Marketing ✓

FEB 2022

### Phase 3

Private Sale And Pre Sale  
Pancakeswap listing  
Coinmarketcap - Cointagecko

JUN 2022

### Phase 5

ETH Chain Bridge  
Farm Integration  
New IDO  
Competitions

APR 2022

### Phase 4

Avax Chain Bridge  
Influencer marketing  
New IDO  
Partnerships

JUL 2022

### Phase 5

Matic Chain Bridge  
Swap Platform  
Kyc Integration  
New IDO

AUG 2022

### Phase 6

NFT Platform  
New IDO  
Competitions

JAN 2023

### Phase 7

stay tuned for more
